

AI OWNERSHIP FRAMEWORK (AIOF)

Establishing Measurable, Enforceable, and Auditable Ownership Across the AI Lifecycle

7 OWNERSHIP LAYERS

LAYER	OWNERSHIP DOMAIN	GOVERNANCE QUESTION	PRIMARY OWNER	KEY ACCOUNTABILITY AREAS	EXPECTED OUTCOME	MEASUREMENT (0-100)
1	BUSINESS OWNERSHIP	Who owns the business outcome?	Business Executive	- Business justification - Risk acceptance - Human oversight - Funding decisions - Strategic alignment	Business accountability exists for AI-enabled decisions.	Business Ownership Score (BOS) $BOS = \frac{\text{Completed Ownership Activities}}{\text{Assigned Ownership Activities}} \times 100$
2	DATA OWNERSHIP	Who owns the data?	Data Owner	- Data quality - Data lineage - Privacy - Data retention - Access approvals	Reliable and governed data supports AI operations.	Data Accountability Score (DAS) $DAS = \frac{\text{Quality} + \text{Lineage} + \text{Privacy} + \text{Access}}{4}$
3	MODEL OWNERSHIP	Who owns model behavior?	Model Owner	- Model development - Validation - Monitoring - Retraining - Documentation	Models remain effective, explainable, and controlled.	Model Accountability Index (MAI) $MAI = 0.3(P) + 0.3(V) + 0.2(M) + 0.2(D)$ P = Performance V = Validation M = Monitoring D = Documentation
4	TECHNICAL OWNERSHIP	Who owns runtime operations?	Platform Owner	- Infrastructure - Security - Monitoring - Availability - Incident support	AI systems operate securely and reliably.	Technical Ownership Score (TOS) $TOS = \frac{\text{Security} + \text{Availability} + \text{Monitoring} + \text{Response}}{4}$
5	GOVERNANCE OWNERSHIP	Who owns governance execution?	AI Governance Lead	- Policies - Controls - Compliance - Audit evidence - Reporting	Governance requirements are operationalized.	Governance Effectiveness Score (GES) $GES = \frac{\text{Policies} + \text{Controls} + \text{Evidence} + \text{Reporting}}{4}$
6	RISK OWNERSHIP	Who owns AI risk?	Risk Owner	- Risk identification - Risk assessment - Risk treatment - Escalation - Board reporting	AI risks are continuously managed.	Risk Ownership Effectiveness (ROE) $ROE = \frac{\text{Identified} + \text{Assessed} + \text{Mitigated} + \text{Reported}}{4}$
7	INCIDENT OWNERSHIP	Who owns AI failures?	Incident Commander	- Escalation - Kill-switch activation - Root cause analysis - Remediation - Lessons learned	AI incidents are rapidly contained and resolved.	Incident Accountability Score (IAS) $IAS = \frac{\text{Response} + \text{Containment} + \text{Recovery} + \text{RCA}}{4}$

CROSS-LAYER ASSURANCE METRICS (EXECUTIVE METRICS)

OWNERSHIP COVERAGE METRIC (OCM) $OCM = \frac{\text{Assigned Owners}}{\text{Total AI Systems}} \times 100$ Measures ownership assignment coverage.	OWNERSHIP CLARITY INDEX (OCI) $OCI = 100 - (\text{Overlap} + \text{Gaps})$ Measures ownership ambiguity.	ACCOUNTABILITY ASSURANCE SCORE (AAS) $AAS = \frac{BOS + DAS + MAI + TOS + GES + ROE + IAS}{7}$ Measures overall ownership effectiveness.	OWNERSHIP RISK FACTOR (ORF) $ORF = \text{Risk Level} \times \left(1 - \frac{AAS}{100}\right)$ Measures risk exposure caused by weak ownership.
--	---	---	---

OWNERSHIP MATURITY MODEL		
1	OWNERSHIP UNDEFINED	No clear ownership assigned.
2	OWNERSHIP ASSIGNED	Ownership assigned but not documented.
3	OWNERSHIP DOCUMENTED	Ownership documented and communicated.
4	OWNERSHIP MEASURED	Ownership measured and performance tracked.
5	OWNERSHIP OWNTINUOUSLY ASSURED	Ownership continuously monitored and improved.

FRAMEWORK FLOW	
	1. ASSIGN OWNERSHIP Assign primary owner for each layer.
	2. EXECUTE RESPONSIBILITIES Owners execute and evidence accountability areas.
	3. MEASURE ACCOUNTABILITY Calculate layer scores (0-100).
	4. AGGREGATE ASSURANCE Compute cross-layer metrics (OCM, OCI, AAS, ORF).
	5. REPORT & IMPROVE Report results, address gaps, and continuously improve.

EXECUTIVE REPORTING OUTPUTS	
	Ownership Coverage Metric (OCM)
	Ownership Clarity Index (OCI)
	Accountability Assurance Score (AAS)
	Ownership Risk Factor (ORF)
	High-Risk AI Systems Without Owners
	Ownership Maturity Level
	Ownership Heat Map
	Ownership Gap Analysis

PURPOSE Establish measurable and enforceable ownership across the AI lifecycle.	PRINCIPLE Ownership must be assigned, measured, and continuously assured.	OUTCOME Clear accountability for AI decisions, risks, controls, and incidents.
