GERALD ON GOVERNANCE

GOVERNANCE THAT OPERATES. TRUST THAT SCALES.

GOVERNANCE GAP ANALYSIS FRAMEWORK (GGAF) v1

Measuring the Difference Between Required Governance Capability and Actual Governance Capability

LAYER & PURPOSE

GAP ANALYSIS DOMAINS

GAP ANALYSIS QUESTIONS

GOVERNANCE GAP QUESTION

OUTCOME

LAYER 5

GOVERNANCE OVERSIGHT LAYER

Strategy, oversight, and assurance at the highest organizational level.

- Governance Strategy
- Governance Objectives
- Governance Reporting
- Board Oversight
- Governance Metrics

- Are governance objectives aligned with business requirements?
- Is governance strategy documented and approved?
- Are governance metrics defined and tracked?
- Does leadership receive regular governance reporting?
- Are oversight activities effective?
- Are governance decisions documented and communicated?

Are governance expectations being established and monitored effectively?

Strategic Oversight Gap Visibility

LAYER 4

ACCOUNTABILITY LAYER

Ownership, authority, and accountability for decisions and outcomes.

- Ownership
- Decision Rights
- Authority Structures
- RACI Models
- Escalation Paths
- Accountability Mechanisms

- Are governance responsibilities assigned?
- Are decision rights documented?
- Are authority levels clearly defined?
- Are escalation paths documented?
- Are accountability mechanisms operational?
- Is segregation of duties maintained?

Who owns governance outcomes, decisions, and failures?

Accountability Gap Identification

LAYER 3

CONTROL LAYER

Policies, guardrails, and controls that translate governance expectations into enforceable mechanisms.

- Policies
- Operational Controls
- Guardrails
- Access Controls
- Data Governance
- Model Governance

- Are required policies documented?
- Are controls mapped to governance requirements?
- Are preventative controls implemented?
- Are detective controls implemented?
- Are controls tested for effectiveness?
- Do controls cover critical risks and systems?

How are governance expectations translated into operational controls?

Control Capability Gap Analysis

LAYER 2

RUNTIME GOVERNANCE LAYER

Monitoring, intervention, and governance during real-time system operation.

- Monitoring
- Enforcement
- Human Intervention
- Escalation
- Incident Response
- Containment & Recovery

- Is runtime monitoring implemented?
- Can governance policies be enforced at runtime?
- Can human intervention override actions?
- Are escalation mechanisms available?
- Are incidents detected and escalated?
- Are containment and recovery procedures effective?

Does governance operate when systems are actively running?

Runtime Governance Gap Visibility

LAYER 1

EVIDENCE LAYER

Logging, audit trails, and evidence to demonstrate and prove governance activities.

- Logging
- Audit Trails
- Traceability
- Reporting
- Metrics
- Retention

- Are governance activities logged?
- Are audit trails complete and immutable?
- Can decisions be traced to approvals?
- Are governance KPIs measured?
- Are governance reports generated?
- Is evidence retained per policy?

Can governance outcomes be demonstrated through evidence?

Evidence Gap Identification

GAP SEVERITY SCALE

0.0 – 0.5

MINOR

Acceptable capability variance

0.6 – 1.0

MODERATE

Improvement required

1.1 – 2.0

SIGNIFICANT

High-priority remediation

2.1 – 3.0

CRITICAL

Immediate governance action required

GAP SCORING MODEL (EXAMPLE)

LAYER	TARGET (1-5)	CURRENT (1-5)	GAP	SEVERITY
5 Governance Oversight	4.5	4.0	0.5	
4 Accountability	4.5	3.4	1.1	
3 Control	4.5	3.9	0.6	
2 Runtime Governance	4.5	2.0	2.5	
1 Evidence	4.5	4.1	0.4	
OVERALL GAP AVERAGE	4.5	3.48	1.02	SIGNIFICANT

GOVERNANCE GAP HEAT MAP

LAYER	GAP SEVERITY
5 Governance Oversight	Minor
4 Accountability	Significant
3 Control	Moderate
2 Runtime Governance	Critical
1 Evidence	Minor

Minor Moderate Significant Critical

ROOT CAUSE CATEGORIES

STRUCTURAL GAPS

Governance architecture deficiencies.

Examples:

- Missing committees
- Undefined ownership
- Weak governance structures

OPERATIONAL GAPS

Governance execution deficiencies.

Examples:

- Weak monitoring
- Ineffective escalation
- Control failures

TECHNOLOGY GAPS

Technology capability deficiencies.

Examples:

- Lack of monitoring tools
- Limited enforcement capabilities
- Missing automation

EVIDENCE GAPS

Governance proof deficiencies.

Examples:

- Missing audit trails
- Incomplete logging
- Weak reporting

GAP PRIORITIZATION MODEL

SEVERITY	PRIORITY	ACTION
CRITICAL	Immediate Action	Address immediately to mitigate material risk
SIGNIFICANT	High Priority	Include in governance roadmap (0-90 days)
MODERATE	Planned Improvement	Schedule improvement (90-180 days)
MINOR	Monitor	Monitor and maintain (Ongoing)

FRAMEWORK OUTPUTS

GOVERNANCE GAP REPORT

Structured documentation of governance deficiencies.

GOVERNANCE HEAT MAP

Visual representation of governance weaknesses.

ROOT CAUSE ANALYSIS

Identification and analysis of underlying causes of gaps.

GOVERNANCE IMPROVEMENT ROADMAP

Prioritized remediation activities and timelines.

EXECUTIVE GOVERNANCE SUMMARY

Board and leadership reporting package.

GERALD ON GOVERNANCE PRINCIPLE

Organizations do not fail because governance documentation is missing.

Organizations fail because governance capabilities are weaker than governance requirements.

Governance Gap Analysis exists to reveal that difference and provide a structured path toward governance improvement.

GERALD.
